

mini-VSAT BroadbandSM KVH CREWlink™ ConnectTwo™ Service

A unique dual-channel solution for use with a single KVH TracPhone VIP-series Antenna System

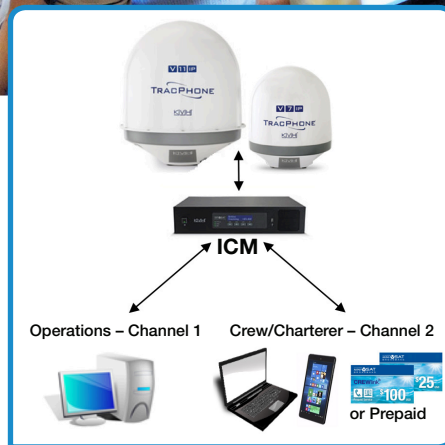

The CREWlink ConnectTwo Service offers a powerful control option for ship owners – the ability for a single KVH TracPhone® V71P or V111P antenna to support two separate airtime plans, each with its own voice and data channel. Now you can provide affordable broadband satellite connections and voice service both for Operations and for crew or charter guests while tracking usage and costs independently. With ConnectTwo, you can prioritize your onboard operational traffic, choose to re-bill your charter customers for their usage as part of their fee, and provide prepaid calling and Internet access for your crew. All of these options and more are now possible with your mini-VSAT Broadband service.

ConnectTwo Highlights

- Enables a single TracPhone antenna system to offer two separate mini-VSAT Broadband airtime plans, each with its own data and voice channel
- Available with the KVH TracPhone V71P and V111P antenna systems
- Each airtime plan has a separate forward link (shore-to-ship) but will share the return link (ship-to-shore)
- The primary channel's return link is always prioritized for highest quality support of operational needs
- The secondary channel is available with the option of either an FX airtime plan or the CREWlink™ Prepaid Service
- Data use (MBs) is counted separately for each plan

The Benefits of ConnectTwo

- Increases your ability to monitor and control your SATCOM costs
- Provides greater transparency into onboard ship-to-shore communications
- Delivers a summary of charges per channel, separating billing for the crew or charter guests' voice and Internet activity from Operations
- Primary Channel supports all airtime plan options and offers data speeds as fast as 4 Mbps shore-to-ship and 1 Mbps ship-to-shore.
- Secondary channel offers data speeds as fast as 2 Mbps shore-to-ship and 512 Kbps ship-to-shore
- Works with mobile devices and KVH's IP-MobileCast™ content delivery service
